

## Prism Microsystems Corporate Fact Sheet

Founded in 1999, Prism Microsystems was a pioneering force in the development of Log Management technology. Building on its reputation as an innovator, the company today delivers the most comprehensive Security Information and Event Management (SIEM) solution in the industry, powered by a unique combination of real-time Log Management and Correlation with Change and Configuration Management.

Prism's customer-centric approach to technology development has played a large part in ensuring that its products are robust, full-featured, and easy to implement and use.

Prism's award winning solutions enable more than 850 customers worldwide to mitigate internal and external threats, comply with a variety of regulatory requirements, and improve IT processes and service availability. Solutions are engineered for flexibility and scalability with the ability to integrate seamlessly with existing IT infrastructures.

Together with modest hardware, manpower and skill requirements, Prism's products provide turnkey, comprehensive capabilities that maximize investment, improve IT processes and achieve tangible, demonstrable cost savings.

### EventTracker

EventTracker is a security, compliance, and operations solution that provides a 360 degree view of your organization's IT infrastructure. It is a comprehensive Security Incident Event Management (SIEM) solution that combines log management, log monitoring, log search, file integrity monitoring, system monitoring, reporting, analytics, and visualization for continuous monitoring of system logs, users, file changes, servers and desktops, all the way to USB and writeable media. EventTracker is designed to meet the security, compliance and operational needs of organizations with 100 to 10,000 devices in their infrastructure, protecting against inside and outside threats. Offering incremental scalability, EventTracker is a cost-

effective and efficient solution providing all the functionality and usability demanded by today's IT security professionals.

EventTracker is able to collect the logs generated from a vast array of applications and devices within an organization's IT infrastructure and provide actionable intelligence in real-time. This data is then stored for analysis and archival. These events are analyzed real-time to determine if risks exist based on a calculation of the threat, asset value, and vulnerability of the asset, as well as through behavioral analysis change audit, and event correlation.

Users access the data through customizable, role-based dashboards. If an incident is detected, IT personnel can be notified by an alert notification, or EventTracker can protect the infrastructure through automatic remediation.

Powerful reporting and analysis tools enable organizations to maintain the highest level of security and compliance with over 2,000 report templates, and audit ready compliance reports for FFIEC, FDCC, FISMA, GLBA, HIPAA, NISPOM, PCI-DSS, and SOX 404. EventTracker also has a "Google-like" search that allows you to quickly and easily search through terabytes of log data to pinpoint critical events behind security and operational incidents.

### Quick Facts

- Founded in 1999
- Privately held and funded. Profitable since 2001
- Headquartered in Columbia, Maryland USA
- R&D facilities located in Columbia, MD and Bangalore, India
- 80+ employees
- Focus on comprehensive security, compliance and change management solutions
- Over 850 global customers

### Senior Management

- A. N. Ananth, Co-Founder and CEO
- Jagat Shah, Co-Founder and CTO
- Jack Stose, V.P. of Sales
- John Sennott, Director of Marketing
